DC Power Systems
and Turn-Key EF&I Solutions
for Mission-Critical Applications

MESA
TECHNICAL ASSOCIATES, INC

OUR STORY

Mesa Technical Associates has built one of the best battery distribution and EF&I (engineer, furnish, install) companies in the industry, providing turn-key DC power infrastructure and support for mission-critical applications like utilities and telecommunications.

We are experts in engineering, furnishing, and installing solutions for a range of applications requiring energy products, batteries, power plant enclosures and structures, and complementary industrial, utilities, and telecommunication products. Our comprehensive, budget-conscious service expertise includes EPA-certified battery recycling services and power system replacement and maintenance, compliance testing, and power plant upgrades.

DC POWER PRODUCTS

Mesa offers a full range of DC power systems, batteries, power distribution systems, power room environmental and shelter/ enclosure products that form the backbone for industrial, utilities, and telecommunications grid deployment projects. Mesa provides the primary engineering design specifications and applications support for our customers' product requirements, and we believe our customer service and support capabilities are unmatched among the power and infrastructure providers worldwide.

TURN-KEY EF&I

Mesa provides a premium, integrated, turn-key solution for all of your DC power system, transmission, and power distribution applications. From initial site survey through final system turn-up and testing, Mesa manages the full range of system selection and provisioning, material logistics, staging, project management, nationwide installation, and final system acceptance and commissioning. Our nationwide network of project managers and certified installers is supported through a network of 12 warehouses and distribution centers reaching all regions of the United States.

RECYCLING

Mesa Technical Associates is a leader in chain-of-custody management. Our management of battery decommissioning and removal projects and our thorough documentation processes have earned us accolades from some of the most competitive companies in the telecommunications industry.

The Mesa expertise is in cradle-to-grave battery recycling services, which includes battery removal and on-site packaging, pick-up, transport, and delivery to EPA-certified smelters around the United States. Mesa manages this process using a team of project managers, a proprietary application for process documentation, and a network of warehouses throughout the United States. Mesa makes it its utmost mission to guarantee safe, environmentally sound battery disposal through EPA and DOT compliance assurance and chain-of-custody best practices.

MOBILE BATTERY TRAILER

Fully customizable mobile power solution outfitted with batteries and accessories to suit your application. A perfect solution for substation managers and plant engineers to help you with NERC compliance testing.

CUSTOM POWER CABINETS

Custom designed indoor and outdoor rated NEMA power cabinets for weatherproofing and protection from harsh elements, corrosion, and theft. Ideal for use in traffic, industrial, utilities, and telecommunications applications.
